Art Unit: 3662

1. The drawings are objected to because Fig. 3a inaccurate winch not connected to lift, #36, #719 not labeled. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. Claim 31 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For Example:

A.) line 7 "the elbow" no proper antecedent basis; and

B.) line 11 "the posts".

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 3662

5. Claims 16-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over British Patent #2, 260, 751 in view of German Publication #19507608, Kisner; Japanese Patent #6296649 and Stanley.

British Patent #2, 260, 751 discloses a substantially similar invalid hoist. British Patent # 2, 260, 751 lacks tubular elements, specific elbow; material, and insert.

German Publication #19507608 discloses tubular construction. Kisner discloses the use of elbow #34. Japanese Patent #6296649 discloses the use of fiber material.

Stanley discloses the use of an insert for reinforcing a tubular member. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide these features to the primary reference. The motivation is to provide a knockdown hoist.

6. The remaining references are cited to show similar structure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Bratlie whose telephone number is (703) 308-2669. The examiner can normally be reached on Mondays through Thursday from 6:30 to 5:00. Friday is the examiner's day off.
